# Presentation Overview

- ▶ Relationships are critical to masculinity
- ▶ Social Network Analysis (SNA)
- ▶ Indicators of a positive masculinity
- ▶ Results from an all-boys school
- ▶ Better utilising data in schools around masculinity issues
  
- ▶ **Acknowledge**
  - ▶ Dr Ray Swann [+M, Brighton Grammar School]
  - ▶ Associate Professor Peng Wang [Swinburne]
  - ▶ Dr Bopha Roden [Swinburne]

05 October 2020  
EDUCATION

## Begin with belonging: Why schools in Victoria need to focus on connection and wellbeing for term four

7 MINUTE READ [Share](#)

### FEATURING

 **Fiona Longmuir**  
Lecturer, Globalisation Leadership and Policy, Faculty of Education

 **Kelly-Ann Allen**  
Senior Lecturer, School of Educational Psychology and Counselling, Faculty of Education

 **Christine Grove**  
Fulbright Scholar and Adjunct Senior Lecturer, School of Educational Psychology and Counselling

REPUBLISH ARTICLE

Belonging, connection and re-engagement must be the priority for Melbourne's schools in term four

## More teachers want out as student wellbeing and parent issues add to workloads

### OPINION

*Why are teachers struggling?  
Because your children are awful*

## 'In crisis for years': The struggle to fix Australia's worst classrooms

### FINANCIAL REVIEW

Private school boys need to stop behaving badly

Six Waverley College students expelled for bullying younger students, principal says

About one in five young Australians will experience a mental health problem like depression or anxiety each year. The COVID pandemic has only intensified mental health concerns in young people.

# Respectful Relationships

ANROWS

AUSTRALIA'S NATIONAL RESEARCH  
ORGANISATION FOR WOMEN'S SAFETY

*to Reduce Violence against Women & their Children*

- Individual confidence as resilience is not only what we need
  - Confident boys can be more pro-violent and less gender equitable
- Respectful Regard and Social Capability
  - Positively related to lower violence attitudes and higher gender equity attitudes
  - *Social resilience* impacts positively on others around them

Cahill, Lusher et al [forthcoming in 2023]

# Respectful Regard and Social Capability

## Respectful Regard

I think about other people's feelings before I say things.  
I am patient with people who can't do things as well as I can.  
I think things through carefully before making decisions.  
Other people's feelings are easy for me to understand.

## Social Capability

I can share my personal thoughts with others.  
If I have a problem, I know there is someone I  
can talk to.  
If I can't handle something I find help.

### For boys:

Social capability and respectful regard are linked not only to positive gender equity attitudes, but also with violence dis-endorsing attitudes and intentions to speak up against sexual harassment.

# Connell's social theory of gender

- ▶ Hegemonic masculinity [dominative form of masculinity that creates unequal gender relations]
- ▶ Boys 'do' masculinity [gender as daily performance/enactment]
- ▶ Boys 'do' masculinity *in relation to* other boys and girls
- ▶ Masculinity 'done' through social interactions in everyday social situations (e.g., schools)
  
- ▶ Relationships are critical to gender
  - ▶ Relationship also critical to resilience, wellbeing and learning

# Serving Two Masters

## Formal School Structures vs Informal Student Culture

### How schools want students to behave

School's view of students

**LEARN  
LEAD  
ACHIEVE**

All schools have formal structures and policies to shape the learning and behavioural expectations of their students. These formal classroom allocations, tutor groups, policies for uniform, behaviour, attendance and more are critical for the functioning of schools.

### How students want students to behave

Students' view of students

**Peer influence**

Equally important though is that all schools have an informal student culture that determines student expectations of one another, of what is valued or not by the students themselves and constitutes an informal code of conduct.

The **formal** and the **informal** may not necessarily align

Peer influence is “...how teenagers’ behaviour is shaped by wanting to feel they belong to a group of friends or peers”.  
 [Raising Children Network, Australian Government].

# Peer Influence

Peer influence affects students in **positive** and **negative** ways...

## Peer learning

Improves academic performance, enhances peer-to-peer social skills, and promotes student engagement

## School connectedness

Improves academic outcomes, increase school engagement, and fosters a positive school culture

## Friendship

Provides emotional support, boosts self-esteem, and promotes a positive school culture

## Equity

Creates an inclusive learning environment, reduces bullying, and improves outcomes for underrepresented groups

**Peer influence is a critical issue and we have not had the tools to measure it..... until now**

## Social isolation

Leads to decreased academic achievement, decreased school connectedness and increased stress and anxiety

## Mental health

Mental distress can impact relationships and stop students from thriving emotionally and socially

## Toxic masculinity

Increases violence, decreases respect towards others and creates an unhealthy student culture

## Bullying

Decreases self-esteem, increases risk of mental health issues and low academic achievement

# Social Network Analysis (SNA)

Make the unseen visible

Friendship  
Disrespect  
Provides feedback

A framework for measuring and understanding peer influence

# Indicators of a Positive Masculinity Culture

# Evidence of link between harmful masculinities and poor health outcomes

- ▶ Negative impacts on:
  - ▶ Individual men (self)
  - ▶ Those around them the men are socially connected to, particularly females but also other men (others)
- ▶ ‘There is strong evidence that young men who subscribe to inequitable gender norms (e.g., believe women are solely responsible for household chores and child-rearing) ... and endorse dominant and hostile forms of masculinities (e.g., believe women are sexual conquests) ... have higher rates of perpetrating psychological, physical, and sexual violence against women.’
  - ▶ Hill et al (2020, p.1)

# School Context

- ▶ Year 11 students
- ▶ All boys schools
- ▶ Victoria, Australia
- ▶ 148 invited, 78 participated (50%)
- ▶ Data collected late 2020 during COVID-19

# Relationship Questions

- ▶ **Friend:** In Year 11, who are your closest friends?
- ▶ **Influence:** In year 11, who are the most popular and influential students? [These people could be influential in a good or bad way].”
- ▶ **Disrespect:** In Year 11, which students are disrespectful towards you?

Network maps (visualisations)

$$\Pr(\mathbf{Y} = \mathbf{y} \mid \mathbf{X} = \mathbf{x}) = \frac{1}{K} \exp \left\{ \sum_Q \lambda_Q z_Q(\mathbf{y}) + \sum_R \lambda_R z_R(\mathbf{x}, \mathbf{y}) \right\}$$

Statistical models for social networks

# Man Box Scale (Hill et al, 2020, p. 4)

## Dominative Masculine Attitudes (Manbox 5)

- ▶ In my opinion, a man shouldn't have to do household chores
  - ▶ Rigid masculine gender roles
- ▶ In my opinion, men should use violence to get respect if necessary
  - ▶ Violence
- ▶ In my opinion, a real man should have as many sexual partners as he can
  - ▶ Hypersexuality
- ▶ In my opinion, a man who talks a lot about his worries, fears, and problems shouldn't really get respect
  - ▶ Self-sufficiency
- ▶ In my opinion, a gay guy is not a “real man”
  - ▶ Heterosexuality and homophobia

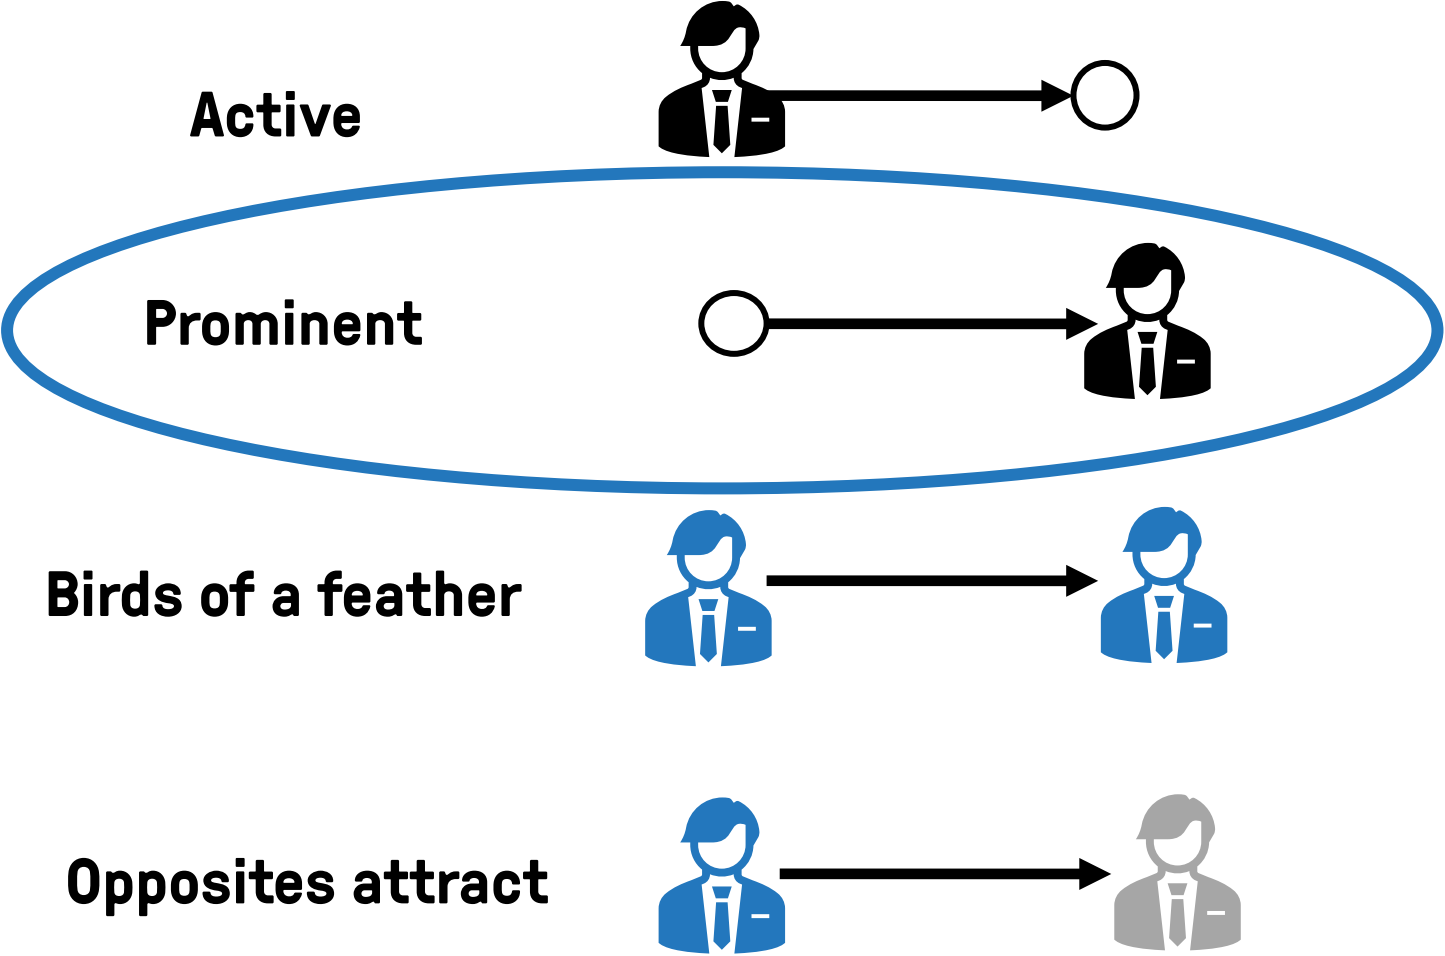

# Other Student Factors

- ▶ Academic performance
- ▶ Prosocial student engagement
- ▶ Years attended school
- ▶ School engagement
- ▶ Mental distress
- ▶ Growth Mindset
- ▶ Tutor group membership

# Student Qualities & Network Structures

Influencers

Are students with certain attributes more connected?

# Indicators of Positive Masculinity

- ▶ P1: Students who are more **socially prominent** (e.g., friendship, influence) will hold more positive masculinity attitudes (low Manbox 5 attitudes)
- ▶ P2: Students who are more **socially prominent** (e.g., friendship, influence) will be high academic achievers
- ▶ P3: Students who are **disrespectful** to others will hold negative masculinity attitudes (high Manbox 5 attitudes)

# Findings

# Friendship

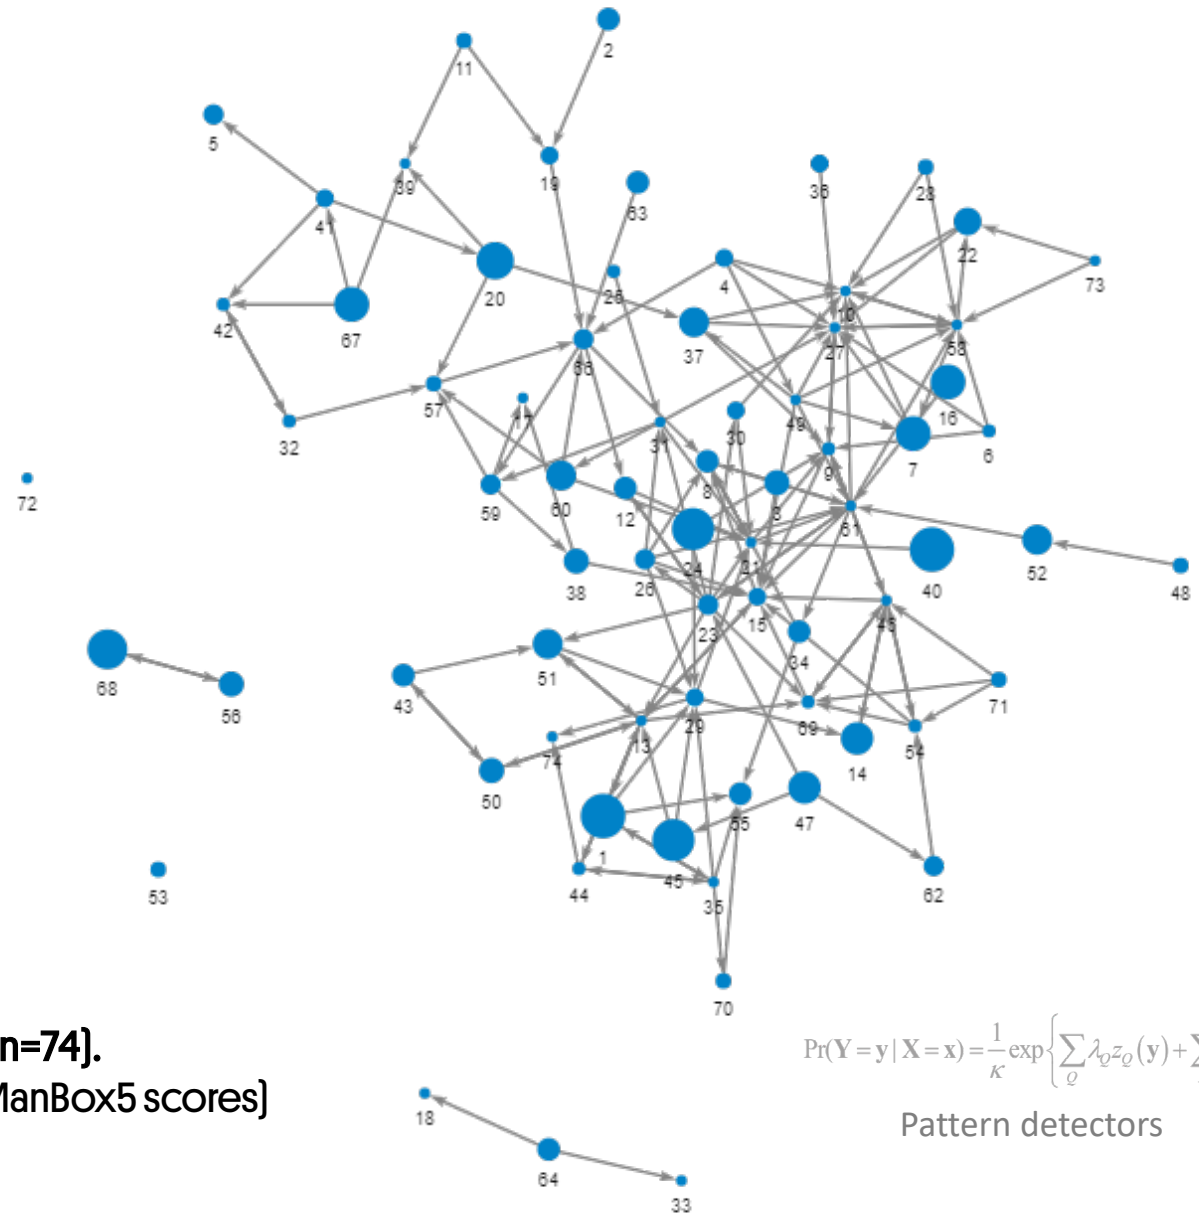

Figure 1 - Friendship network of Year11 student participant (n=74).  
Larger dots=more negative masculinity attitudes [i.e., higher ManBox5 scores]

$$\Pr(Y=y|X=x) = \frac{1}{K} \exp \left\{ \sum_Q \lambda_Q z_Q(y) + \sum_R \lambda_R z_R(x,y) \right\}$$

Pattern detectors

Active

# Summary

- ▶ Evidence of positive masculinities in this school (i.e., more *gender equitable attitudes* held by influential students)
- ▶ P1: Students who are more **socially prominent** (e.g., friendship, influence) will hold more positive masculinity attitudes (low Manbox 5 attitudes)
- ▶ P2: Students who are more **socially prominent** (e.g., friendship, influence) will be high academic achievers
- ▶ P3: Students who are **disrespectful** to others will hold negative masculinity attitudes (high Manbox 5 attitudes)

# Limitations

Lower participation rates by students in this academic research [50%] – due to consent procedure

Significant teacher resources used to gain consent by students and parents/guardians

Overall year level summaries of student responses [non-targeted data]

> 85% participation

Run as part of school program to improve learning & wellbeing [need to inform parents/guardians, but do not need extra consent]

Actionable, identifiable data to assist at risk students and improve child safety

## SEMI Action Framework: Support, Encourage, Monitor, Intervene

### Year Level Insight

#### Challenge

Dominant masculinity attitudes

Broader challenges for Year 8 are around reducing an endorsement of dominant masculinity attitudes and valuing academic achievement.
